Kebony Distance band

Product description

Kebony Distance band on a roll creates spacing between decking boards and substructure when installing the boards. This provides improved ventilation and reduces risk of water and dirt accumulation. The narrow contact width of 15 mm gives minimal contact area and contributes to structural protection.

The 7 mm height extension allows screw flexibility thus absorbing the swelling and shrinking effects and reducing the risk of shearing. The ribbed surface provides shock absorbing benefits with excellent grip for screw connections.

Advantages

- Fast and easy to install
- Improves ventilation
- Reduces water accumulation
- Dampening sound and increasing walking comfort
- Reduces risk of screws shearing

General information

Material	Extruded polyvinyl chloride PVC thermoplastic black Shore hardness 90	
Dimensions	Roll length 10 meter Width 15 mm Height 7 mm	
Package content	Box with 8 rolls (80 meters)	
Installation	<p>Kebony Distance band is inserted between the decking board and substructure when screwing boards (direct screw connection) thus clamping the band in place. The material is screw-through. Cut to length if necessary.</p> <p>Distance band</p>
